

MTwallets is a place for engineering analysis, design, and builds from mechatronics through software.

You'll find categories like the, "quadcopter" with successive posts building into a series. The general theme might be dynamics and controls, but you'll see deep-dives across a range of underlying mechanics and applied math.

Comments encouraged! I love to hear from any students or others interested in new topics we can bring forth together here!

Please inquire if you have commercial interests to explore away from this learning blog.

-Mike Timmons
